BASES PARASOL

MANTENIMIENTO RECOMENDADO

Para todos los muebles presentados en nuestro catálogo recomendamos realizar una limpieza periodica a base de agua templada y jabón neutro. No obstante para todos aquellos muebles con madera de teca es importante tener en cuenta las siguientes informaciones

MADERA DE TECA

El color natural de los muebles de madera de teca expuestos al exterior y la intemperie ira cambiando del dorado natural de la teca a una patina gris plata o gris oscuro que cubre la madera. Este proceso es cosmético y no daña la fuerza o la calidad de la madera.

Este proceso se inicia inmediatamente por la acción del sol, y los agentes atmosféricos, y tomará aproximadamente nueve meses o menos, dependiendo del grado de exposición a la luz solar y la lluvia. Las imperfecciones, que son propiedades inherentes de la madera, se mostrarán con el tiempo

La madera puede expandirse y contraerse naturalmente causando que el grano se eleve. Esto es de esperarse con la exposición a los elementos y se estabilizará después de que ocurra la meteorización inicial

Para mantener los muebles de teca, use un cepillo de cerdas suaves y golpee ligeramente en la dirección del grano para eliminar el polvo de la superficie. Para una suciedad más difícil, la madera se puede lavar con una solución suave de cuatro partes de detergente para la ropa o jabón para lavar platos en una parte de lejía en agua, luego enjuagar bien y dejar secar completamente. Engrasar la madera puede causar moho o coloración irregular.

La teca está protegida por sus propios aceites naturales que migran a la superficie de la madera y hacen prácticamente impermeable del agua a la madera. Como tal, no se recomienda el uso de barnices, selladores de agua o aceite en los muebles de teca.

Los productos como el barniz de poliuretano son difíciles de eliminar sin un lijado fuerte. El aceite no impedirá que la madera se ponga gris y con frecuencia crece moho en los muebles (que por lo general aparece como puntos negros o parches). La eliminación del moho en la superficie requerirá lavar los muebles con lejía y jabón después de lijar

Para limpiar la teca y eliminar la patina gris se puede usar un limpiador específico par madera de teca. Este producto es fácil de utilizar y producirá resultados dramáticos. Primero retire la pieza de cualquier superficie o quite todo lo que puede ser afectado por el proceso de limpieza. El limpiador de teca no hará daño al césped o a alguna fibra de vidrio pero si puede dañar las superficies pintadas o mancharlas. Use siempre guantes de latex y gafas al utilizar este tipo de limpiador. Siga siempre las instrucciones del limpiador.

No recomendamos el tratamiento de la madera, el uso de limpiadores puede afectar a la madera y no esta cubierto por la garantía del mueble.

FUSION BETON

CHARCOAL

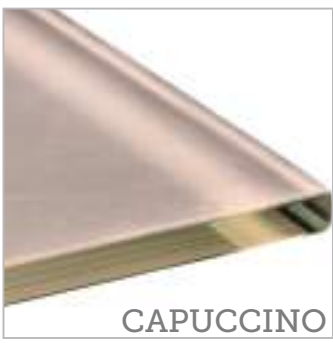

PRINTED GLASS

Material compuesto por una base de vidrio templado y una superficie de pequeños cristales porcelánicos proyectados.

Cristal

CRISTAL

Es un vidrio templado de seguridad, mediante procesos térmicos y químicos, aumentando su resistencia si lo comparamos a otros cristales. Se presenta en acabado mate grabado al ácido, consiguiendo el aspecto traslúcido.
La limpieza es el único mantenimiento recomendado.

ALU

Las estructuras de aluminio ofrecen un óptimo comportamiento en el exterior, por su resistencia, ligereza y antioxidación. El acabado superficial a base de pigmentación y pintura al horno texturizada, protegen de la decoloración ante los rayos ultravioletas.

La limpieza es el único mantenimiento que requiere el aluminio.
